RESEARCH INTERESTS

Computer Vision, Object Detection & Tracking, Human/Animal Behavior Understanding, Lightweight Deep Learning

EDUCATION

Hanbat National University, Daejeon, Korea — Mar. 2025 – Present
Department of Computer Engineering (Transfer student, 3rd-year entry)

- GPA: 4.12 / 4.5 (current)
- Expected graduation: Feb. 2027
- Completed the first two years through the Academic Credit Bank System before transferring

RESEARCH PROJECTS

Lightweight Deep Learning for Resource-Constrained Environments — Sep. 2026 – Present
Team Course Project, Internet of Things (Major Course)

- Studying lightweight deep learning techniques, including pruning, quantization, and knowledge distillation.
- Analyzing EfficientSAM (CVPR 2024) and its official implementation.
- Planning experiments that compare model size, inference speed, and segmentation performance.

Evaluating Null-Argument Tracking in Korean Multi-Turn Dialogue under Speaker, Addressee, and Discourse-Entity Shifts — Sep. 2026 – Present
Team Course Project, Natural Language Processing (Major Course)

- Developing an experimental framework to evaluate null-argument tracking in Korean multi-turn dialogue.
- Refining the research question and experimental methodology.

PROJECTS

BPT — AI-based Exercise Posture Correction Application — 2026 – Ongoing
Capstone Design | Role: UI/UX Designer, Frontend Developer, Project Manager

- Developing the Flutter frontend of an AI-based exercise posture correction application.
- Designing and implementing user interfaces for posture analysis results and personalized exercise feedback.
- Collaborating with AI and backend team members for system integration.

Gyeonju Travel — Personalized Pet-friendly Travel Application — 2026 – Ongoing
Team Project | Role: Project Manager, Frontend Developer
Released on the App Store | Korea Tourism Organization Contest entry (in progress)

- Developed a mobile application for recommending pet-friendly walking routes.
- Integrated Korea Tourism Organization and Kakao Map APIs.
- Implemented route recommendation, map visualization, bookmarking, and travel-record features.
- Deployed the application to the App Store after testing through Apple TestFlight.

Silver Stop — Autonomous Driving AI Project (Pedestrian Detection) — 2025
Team Project, Hanbat MOBI Autonomous Driving Camp | Gold Prize

- Adapted a camp-provided YOLO example to detect pedestrians in Python.
- Integrated real-time camera streaming with ultrasonic distance sensing.
- Implemented an automatic stopping mechanism for pedestrian safety.

WORK EXPERIENCE

Robert Bosch Korea — Technical Sales Team Intern Jan. 2026 – Jun. 2026

- Managed customer unit-price and sales data for the Technical Sales team.
- Cross-checked customer unit prices against SAP records to ensure data accuracy.

HONORS AND AWARDS

Encouragement Award, Living Lab Program — Reusable Cup Return System 2026
Gold Prize, Hanbat MOBI Autonomous Driving Camp — YOLO-based Pedestrian Detection 2025
Encouragement Award, Entrepreneurship Camp — Geumsan Ppipo Healthcare Application 2025

SKILLS

Mobile: Flutter (Dart) — used in capstone and app-release projects
Programming / AI (basic): Python, PyTorch, OpenCV, YOLO
Tools: Git / GitHub
Language: English (TOEIC 830)

CERTIFICATIONS

- Engineer Information Processing — Written Exam Passed
- Linux Master Level 2
- Network Administrator Level 2
- Computer Specialist in Spreadsheet & Database Level 1

RELEVANT COURSEWORK

Computer Vision, Natural Language Processing, Internet of Things

OTHER ACTIVITIES

Study Group Organizer, LikeLion Mar. 2026 – Present
Reporter, Herald English Newspaper Mar. 2025 – Aug. 2026
Working Holiday & Study Abroad, Australia Jun. 2020 – Feb. 2023
